Protocol	3.1.22 Altered Mental Status - Adult	Last Reviewed/Update Date	
Author / Owner		Medical Director	

Altered mental status may be caused by neurological trauma, overdose, poisoning, hypoglycemia, decreased oxygenation or other illness. Treatment goals of the patient with an altered mental status in the pre-hospital environment include: ensuring responder safety, assessing for treatable causes, assuring adequate airway control and oxygenation, advanced life support when indicated, and safe timely transport to the appropriate care facility.

1. Baseline care standards.
2. Manage airway per protocol.
3. Assess level of consciousness using AVPU.
4. Administer oxygen 15L per minute via non-rebreather.
5. Obtain focused history and physical exam of environment for clues.
6. Obtain blood glucose level. Follow diabetic emergency protocol for treatment as needed.
7. Wear facial PPE for any signs of fever or rash with altered mental status.
8. Provide appropriate trauma care as necessary.
9. Establish IV of Normal Saline at TKO rate.
10. If signs of shock, give Normal Saline bolus 250 ml.
11. Request ALS intercept for pharmacological intervention in preparation for possible seizure activity.
